

# Cold Rush

## Cold Therapy System

at CarePro Home Medical

Cold and compression systems, such as Cold Rush, have demonstrated their effectiveness in decreasing the reliance on pain medications and aiding in patient recovery.

1

### Why cold?

The Cold Rush system utilizes cold therapy to aid healing from injuries or surgeries. It aims to reduce pain and swelling, promoting faster recovery.

2

### How does Cold Rush work?

To use the system, fill it with ice and water, connect the hose to a pad that wraps around the affected area, and turn it on. You'll experience cold sensations, with adjustable levels of cold for comfort.

3

### What are the benefits of using the Cold Rush System?

- Reduces pain and swelling
- Convenient and less messy than ice bags or gel packs
- Compact design allows for easy transport
- May decrease reliance on pain medication after injury

4

### Will insurance cover my Cold Rush system?

All Cold Therapy systems, including the Cold Rush System, are generally not covered by insurance. The device can be rented or purchased out right.

5

### How long do I need to use my Cold Rush?

The application of cold therapy products will be determined by your healthcare provider. They will guide you on various aspects, including frequency of use, temperature settings, duration of breaks between applications, and how to monitor your skin during treatment.
